Making good choices when mounting images ready for framing is the key to presenting pictures at their best. But those choices depend on the range available to you. It's not just a matter of colour: variations in tone and texture can make a massive impact on how a framed piece looks. **Arqadia's** extensive mountboard range offers a wide selection of colours, textures, styles and properties. **DIYframing** supplies the complete range of Arqadia boards from white core to two-tone, layered core boards.

The range includes:

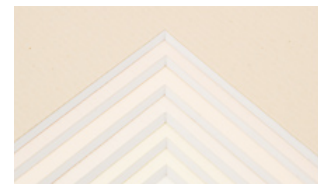

White Core / Conservation boards - 1400 microns (815 mm x 1120) The range comprises over 140 shade / texture choices. The core is treated so that the cut edge remains white without darkening. Conservation boards within the range meet the Fine Art Trade Guild standard for conservation framing.

Black Core Boards - 1400 micron, 815mm x 1120mm. These boards have a face (colour) panel in the same shade as a similar white core board. When cut with a (bevel) mount cutter, the angled edge is in black. There is a choice of 18 shades

Special Finish: Metallic and Suedette - 1400 micron, 815mm x 1120mm. In this range there are two boards with a metallic effect surface, whilst the suede effect boards are available in a range of 9 shades.

Extra Thick Mount Board - 815 mm x 1120 mm. Available in a range of 17 shades, each one featuring a white core edge. Boards vary in thickness: some are 2000 microns others are 3500 microns. You will need a specialized bevel edge cutter when working with extra thick boards.

New from Arqadia are two, **Layered Core Boards**, offering 4 presentation styles: these are duplex boards featuring a black face and either an alternative Hayseed or White face. When cut, the boards reveal layers of black and white cores.

A further 19 shades form a **New Additions range**. These shades are all 1400 microns, conservation grade boards. Best of all they feature lively, contemporary tones. NB size is slightly different to other ranges: 800 mm x 1200 mm.

Not sure what to choose: contact DIYframing. As well as stocking the boards we supply chevron sets for the whole ARQADIA Range
